

SOURODIP KUNDU

Lead Software Engineer • Frontend-Focused Full Stack • React.js | TypeScript | Node.js | GraphQL | AWS
+91 98743 82024 | sourodipkundu.w@gmail.com | [linkedin.com/in/sourodip-k](https://www.linkedin.com/in/sourodip-k) | github.com/mrsourodip | Pune

PROFESSIONAL SUMMARY

React-focused Lead Software Engineer with 4+ years of experience building and modernizing enterprise-scale IAM and identity governance platforms. Specialized in React.js, TypeScript, Micro Frontends (Module Federation), Redux, and TanStack, with strong full-stack expertise in Node.js, GraphQL, and AWS serverless. Led large-scale modernization at IBM (ISIM/ISC/ISVG), migrating legacy systems to React with Carbon Design System, improving scalability, maintainability, and release velocity. Recognized as Top Talent 2024 and Top 3 at Semicolons Hackathon 2025 (250+ teams), with strong focus on system design, performance, and AI-assisted engineering.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), Redux, TanStack Query & Form, Webpack Module Federation, Next.js, Micro Frontends, IBM Carbon, Framer Motion, HTML5, CSS3

Backend & Cloud: Node.js, Express.js, Nest.js, GraphQL, REST APIs, AWS (Lambda, API Gateway, CloudWatch), Azure, DynamoDB, MongoDB, SQL

Tools: Git, GitLab, CI/CD, Jira, Postman, Agile/Scrum, IBM Bob, Antigravity, Claude, Lighthouse

PROFESSIONAL EXPERIENCE

Lead Software Engineer | Persistent Systems

Dec 2025 - Present | Pune, India

- Owned UI modernization strategy across IBM ISC and IBM ISIM, leading migration from Dojo to React.js and TypeScript with Carbon Design System, eliminating legacy UI bottlenecks and reducing front-end technical debt by 40%+ across modules.
- Defined and drove enterprise-wide Microfrontend architecture adoption across Access Certification, ARC, and Authorization modules, enabling independent team ownership, modular scalability, and faster release cycles (~30% improvement) while establishing reusable UI standards across products.
- Standardized front-end engineering practices across teams, driving platform-wide adoption of scalable UI patterns, improving maintainability, reducing duplication, and increasing developer productivity across multiple IAM modules.
- Led AI-assisted engineering transformation, integrating tools like IBM Bob into daily workflow for automated test generation and unit test creation, improving test coverage and reducing manual unit testing effort by 30-40%.

Senior Software Engineer | Persistent Systems

Jul 2024 - Dec 2025 | Pune, India

- Delivered critical features for IBM Security Verify Governance (ISVG) including Manage Certification and Authorization modules, improving enterprise IAM workflow efficiency and enabling faster, more reliable access governance operations at scale.
- Built and enhanced ARC (Activity Risk Mitigation) module for real-time detection of Segregation of Duties (SoD) and Sensitive Access violations, strengthening enterprise compliance posture, improving audit readiness, and reducing security risk exposure.
- Modernized legacy Dojo.js-based access workflows (Request, Edit, Delete, View Access) by introducing time-bound access controls and native file upload capability, significantly improving user experience and reducing manual support overhead.
- Designed and implemented dynamic Custom Roles framework using TanStack Form, along with i18n and RTL support, reducing configuration effort by ~35% and enabling scalable adoption across global user bases.

Software Engineer | Persistent Systems

Jun 2022 - Jul 2024 | Pune, India

- Developed and integrated REST APIs using TypeScript in a Node.js environment, ensuring seamless integration with front-end systems and databases while improving maintainability and scalability of services.
- Led migration and modernization of legacy Java APIs to TypeScript, including detailed analysis, documentation, and re-engineering of business logic to optimize performance and reduce technical debt.
- Designed and implemented new backend capabilities such as AWS DynamoDB audit logging and event tracking using AWS Lambda, enabling improved observability and real-time change monitoring across systems.
- Independently enhanced critical features including Rehire scenarios, GPN collision handling, and AJV validation, while performing RCA using AWS CloudWatch and Lambda, resolving QA/production incidents and improving system stability.

KEY PROJECTS

- Portfolio Website

| React 18, TypeScript, Framer Motion, Matter.js, MapLibre GL, Vite

[Live]

Interactive portfolio with dark/light mode, drag-and-drop layout, smooth animations, and an embedded map and fully responsive.
- Phool4U

| Next.js, Supabase, Gemini API, Framer Motion

[Live]

Full-stack flower delivery platform with product catalog, cart, order management, and user authentication.
- HelloKirana

| React, Node.js, Express.js, MongoDB

[GitHub]

Full-stack e-commerce app for local grocery stores with product management, cart, and order processing end-to-end.
- ECommerce API

| Node.js, JWT, Helmet, Rate Limiting

[Swagger]

Secure REST API with JWT auth, product CRUD, order management, and security hardening via Helmet and rate-limiting.

CERTIFICATIONS & ACHIEVEMENTS

- Certifications:

AWS Certified AI Practitioner • Azure Fundamentals (AZ-900) • Generative AI Leader • React & Problem Solving - HackerRank
- Awards:

Top Talent 2024 • Top 3, Semicolons 2025 - Hackathon, Persistent Systems (250+ teams) • Bravo Individual & Team Awards (5x)

EDUCATION

B.Tech, Computer Science & Engineering (CGPA: 8.2/10)	University of Calcutta	2022
B.Sc (Hons.), Computer Science - First Class	University of Calcutta	2019
